PROJECTS

Beauty Salon Scheduler and Customer Service Specialist

- Designed and created a full-stack website for a beauty salon where customers can pre-book appointments, receive confirmation emails, and write reviews. The admin page utilises EJS templates to manage registrations and reviews.

News API: A web application for displaying news articles with user authentication

- The News API is a web service that allows users to obtain JSON-formatted news stories from various sources. Users can browse many categories of their choice. Users can also use their credentials or Google authentication to access the programme. Session management is used by the application to provide authentication, The News API is built with NodeJS, MongoDB, and Express Session.

Quora for Engineering Students

- Designed and developed a web template and web page, as well as integrated the Mailchimp API for newsletter distribution.The design was straightforward, with a search bar and a list of items on a single web page.

Weather API

- Designed and built a web page for weather information based on any city name entered by the user.
- Used OpenWeather API for fetching the weather reports of cities.

Newsletter

- It is a website that collects user information and keeps it in a database.
